

ARMIN RONACHER

NO ASSUMPTIONS

The Role of the Modern CTO

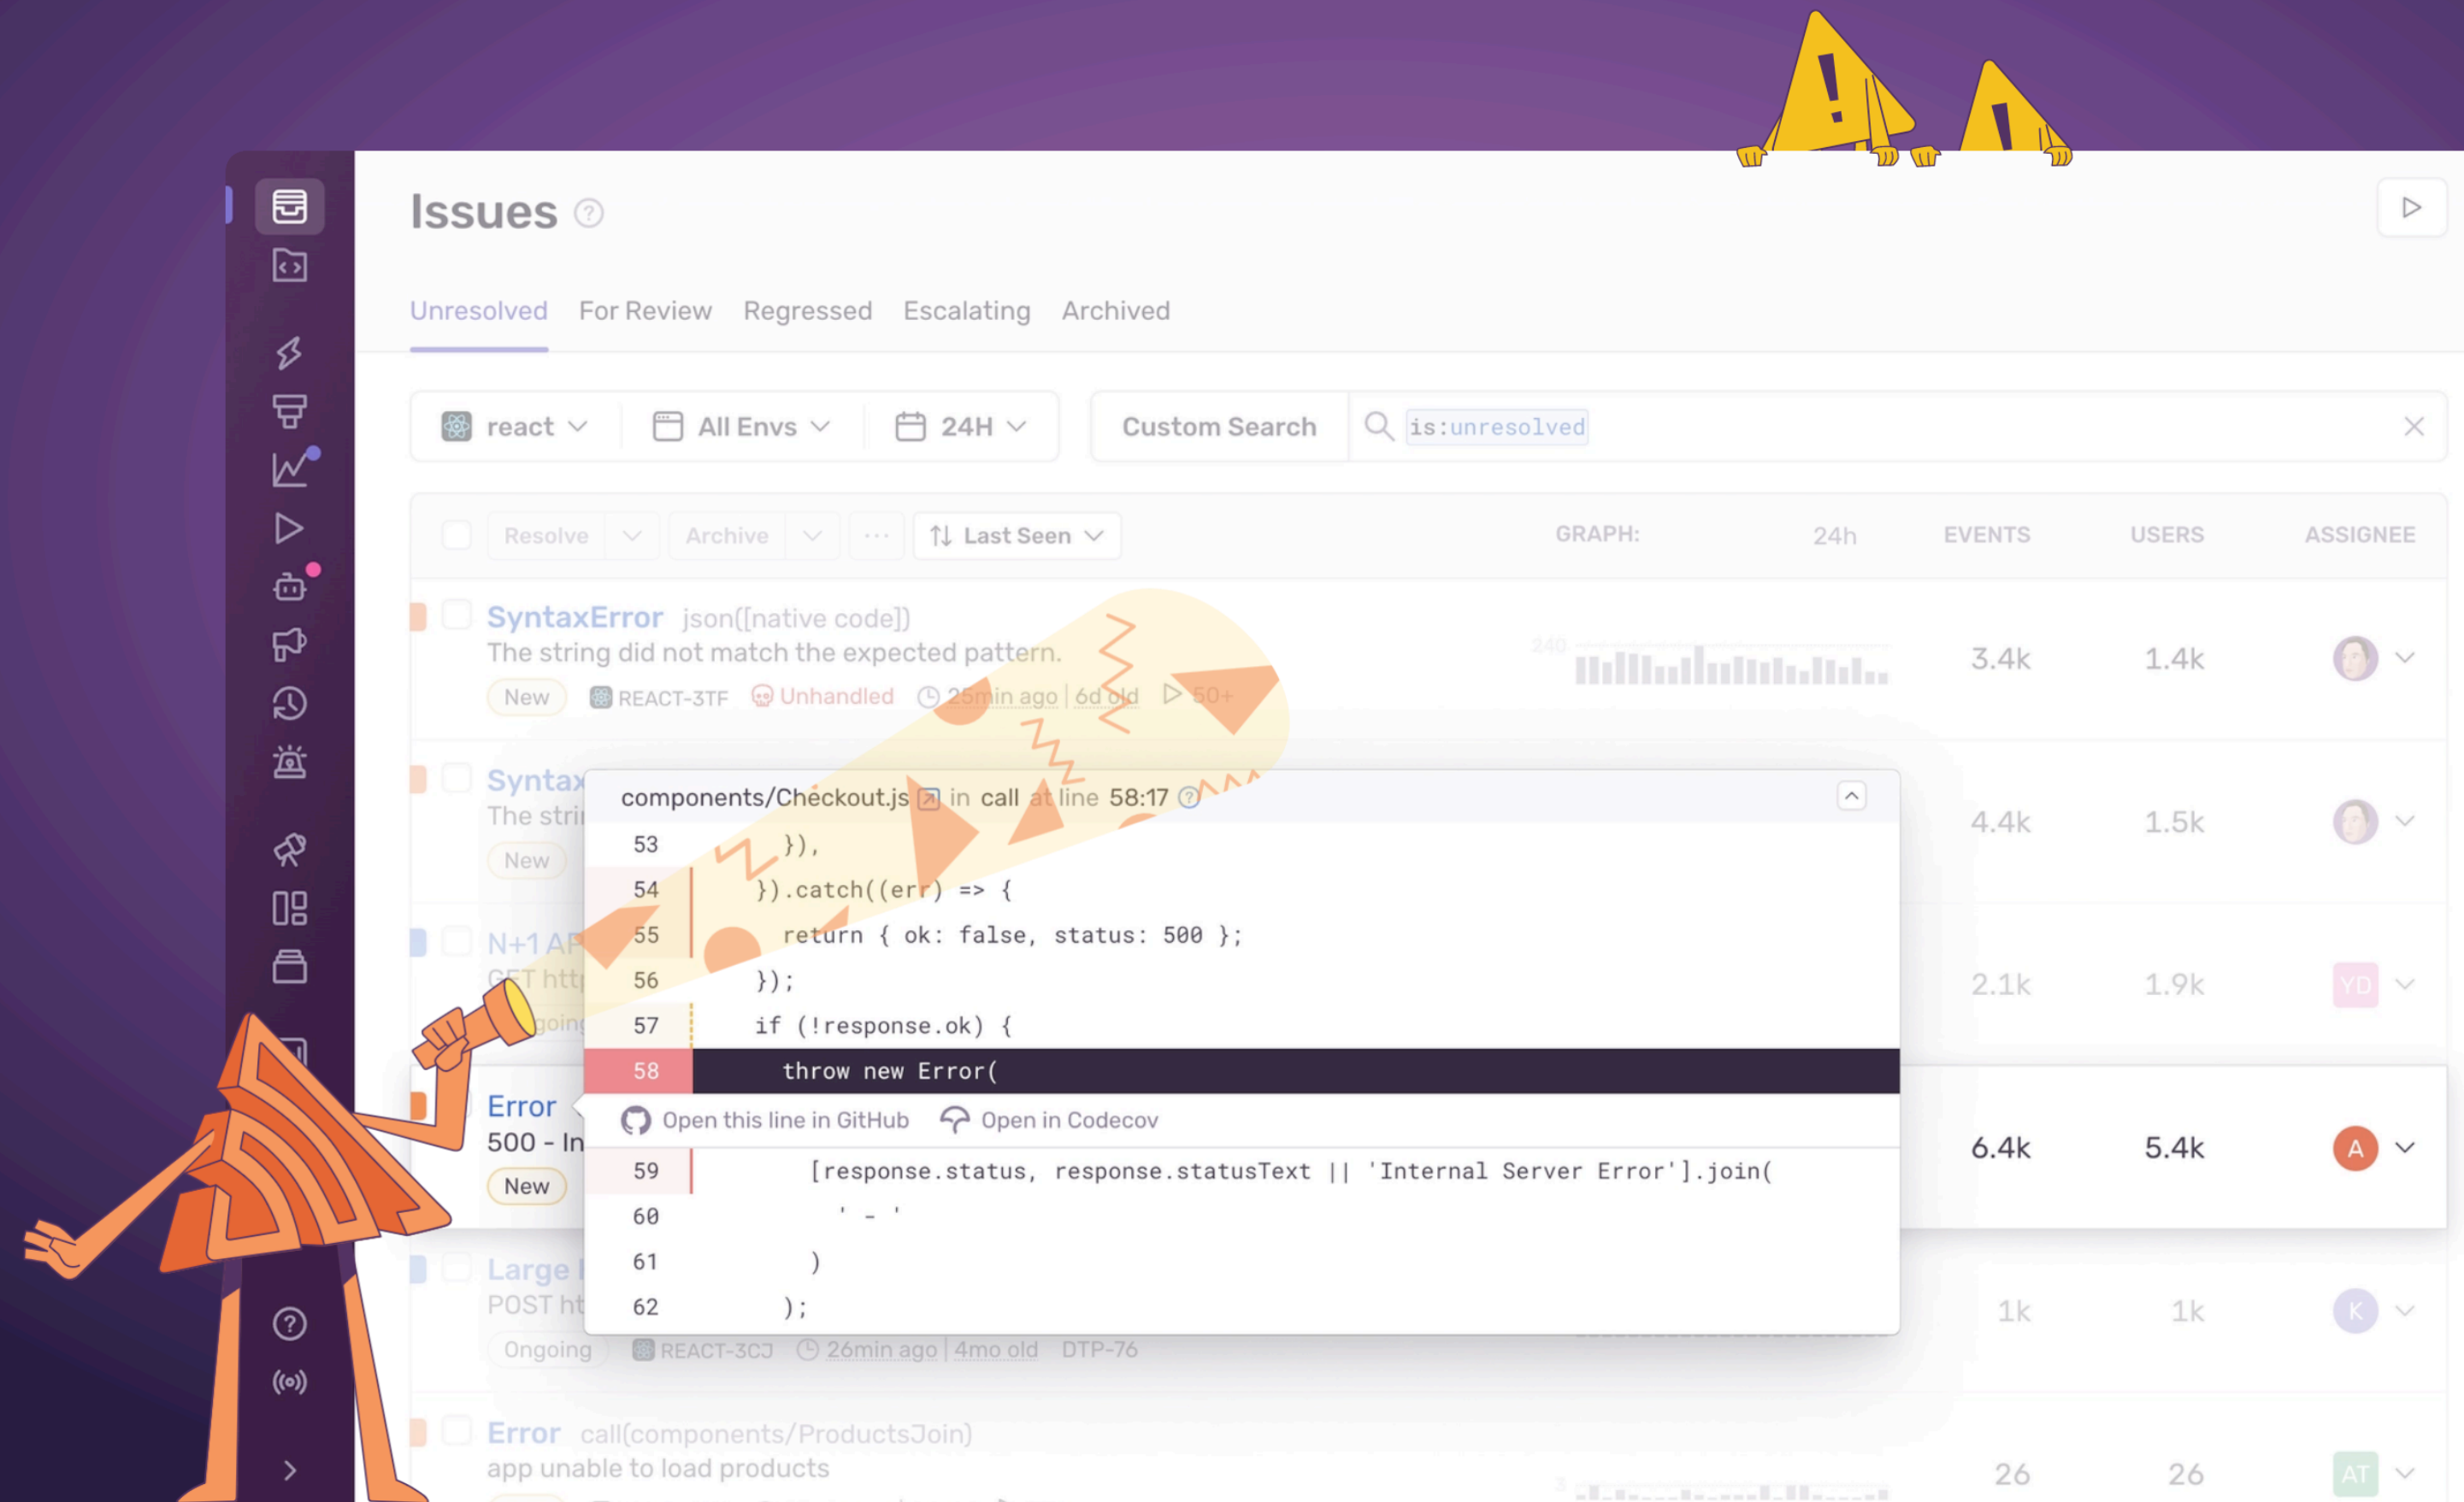

WHO AM I

- Armin *@mitsuhiko* Ronacher
 - find my stuff at mitsuhiko.at
 - Twitter/X: x.com/mitsuhiko
- VP of Platform at Sentry
- Creator of Flask, Jinja and many other Open Source libraries
- Building Open Source Projects for 20 Years

Code breaks, fix it faster

Application monitoring software considered "not bad" by 4 million developers.

The image shows a screenshot of the Sentry Issues interface. At the top, there are tabs for 'Unresolved', 'For Review', 'Regressed', 'Escalating', and 'Archived'. Below this is a search bar with filters for 'react', 'All Envs', and '24H'. A custom search filter 'is:unresolved' is applied. The main area displays a list of issues with columns for 'GRAPH', '24h', 'EVENTS', 'USERS', and 'ASSIGNEE'. A code editor window is open over the first issue, showing a JavaScript snippet with a highlighted error on line 58: `throw new Error(`. The code snippet is as follows:

```
53     }},  
54     }).catch((err) => {  
55       return { ok: false, status: 500 };  
56     });  
57     if (!response.ok) {  
58       throw new Error(  
59         [response.status, response.statusText || 'Internal Server Error'].join(  
60           ' - ' +  
61         )  
62       );  
63     }  
64   }  
65 }  
66 }  
67 }  
68 }  
69 }  
70 }  
71 }  
72 }  
73 }  
74 }  
75 }  
76 }  
77 }  
78 }  
79 }  
80 }  
81 }  
82 }  
83 }  
84 }  
85 }  
86 }  
87 }  
88 }  
89 }  
90 }  
91 }  
92 }  
93 }  
94 }  
95 }  
96 }  
97 }  
98 }  
99 }  
100 }
```

WHAT'S THERE TO BUILD?

RESEARCH AND PRODUCTS

- Technology companies often start out with a vision
- Then march towards development of that idea
- In many cases they are leveraging independent research
- Particularly startups do not typically have an R&D department

MODERN TECHNOLOGY MAKES THE IMPOSSIBLE POSSIBLE

- Compute and storage is becoming extremely cheap
- LLM/AI is being greatly subsidized by venture capital

“We set out to build a distributed database with zero latency”

A VISIONARY

“We are building a storage system with infinite storage”

ANOTHER VISIONARY

UNDERSTAND WHAT CAN BE BUILD
UNDERSTAND HOW IT COULD BE BUILD

IMPOSSIBLE VS EXPENSIVE

- It's very possible some things will never work
- But many things work with tradeoffs or approximation:
 - Sometimes the tradeoffs are compromising a key part of the experience
 - More commonly an approximation of the goal can work, but it's too expensive

THINGS MIGHT CHANGE

- It might be too expensive today
- For some things advancements in computing can catch up with implementation time
- **When the cost drops below what the market is willing to pay, it becomes incredibly appealing**

CONNECTING THE TECHNOLOGY WITH THE PRODUCT

- As a CTO you have to have a good understanding of what the market is willing to pay
- How to approximate this on the technology front
- And to use the foresight, developments and clever tradeoffs to inform the product side of the equation

**UNDERSTAND WHAT IT COSTS IN RELATION TO
VALUE DELIVERED (WHAT A CUSTOMER IS WILLING
TO PAY)**

CONSTRAINTS

“The more constraints one imposes,
the more one frees one’s self. And the
arbitrariness of the constraint serves
only to obtain precision of execution.”

IGOR FYODOROVICH STRAVINSKY

SETTING CONSTRAINTS

- Constraints are useful
- But constraints are better if they are meaningful
- Constraints ideally are informed by business objectives (cost, desired behavior)

EXAMPLES FROM SENTRY

MEANINGFUL CONSTRAINTS

- Business objective: **get started within 5 minutes**
 - As a user I can rely on the system automatically configuring itself
 - As a user I do not need to manually instrument my application to derive value from the product
- Business objective: **offer a simple 29 USD/month plan**
 - Constraint: people might not pay for excess traffic
 - Quota and rate-limiting aware SDKs
 - Sampling awareness

**UNDERSTAND AND LEVERAGE BUSINESS
CONSTRAINTS. UNDERSTAND HOW VALUE IS
DELIVERED**

WRONG BETS AND HEDGING

KEEP VETTING

- Qualified assessment today
 - ➔ incorrect assumption about the state tomorrow
- Technologies and tastes can change
- Significant advancements can happen

MEASURE THE RIGHT THING

- Incorrect measurements can lead to wrong conclusions
- Maybe what you measure doesn't matter

THE BUSINESS IS WRONG

- Is the ask qualified?
- Does it have data to back up the bet?
- There might be data that disproves it

TELL THE STORY

- Some ideas are not right for the time
- Marketing and Brand can help with story telling
- If it's worth doing

**THINGS CHANGE. MEASURE. PUSH BACK.
LEVERAGE THE BUSINESS TO TELL THE STORY.**

TALK TO ME:)

**OPEN
SOURCE
PLEDGE**

Pay your share

Whether you're a CEO, CFO, CTO, or just a dev, chances are your company depends on Open Source software. It's time to pledge back.

① Pay Open Source maintainers

The minimum to participate is \$2,000 per year per developer at your company.

② Self-report annually

Each year, publish a blog post outlining your payments to maintainers.
